Example cover letter for Unity Developer Job at Rescape Health:

I would like to apply for a Unity Developer position at Rescape.

During the last year, I have been learning a lot about all things XR while studying towards an MA in Virtual and Extended Realities in Bristol. Multiple group projects and practical explorations helped me to strengthen not only my technical skills in softwares such as Unity and Blender and creative skills in storytelling and experience design, but also my skills in team work, production processes and project planning.

Given a brief that asked us to enhance people's creativity, I developed a short interactive VR experience in a small group. This involved a lot of research into emotions and mood and how these might be affected and changed by visual and auditory information. I am very excited about the possibilities that this could offer and when I found out about Rescape's use of VR to help with pain relief and anxiety, I wanted to be a part of that!

My previous professional experience includes working as a freelance unity developer for Anagram on their interactive VR narrative experience Goliath. I demonstrated my Unity and C# skills, developed my problem solving skills and learned a lot about different techniques for project management, QA and performance testing and optimisation.

Next to that, I worked on a lot of smaller projects, such as using the Vuforia engine for a mobile-based AR experience, using Vive trackers, the leap motion and an arduino to create a haptic VR experience, and making a mixed reality escape room game.

I would love to talk more about these and any other questions you may have during an interview.

I attached my CV and more information about past projects can be found on my website:
www.juliaronneberger.com

I'm looking forward to hearing from you,
Best regards,
Julia
